

**AMENDMENTS TO THE ABSTRACT OF THE DISCLOSURE**

Please enter the following Abstract of the Disclosure in the record:

A coffee machine, especially an espresso machine, comprising a brew chamber provided with at least one coffee outlet, a height-adjustable spout for ejecting coffee, and an impact surface arranged upstream of said spout. The aim of the invention is to ensure that, despite the fact that the height of the spout can be adjusted, the coffee produced is of a consistently high quality. To this end, the impact surface is arranged at a fixed distance from the coffee outlet, coffee passing through said outlet hitting the impact surface and being guided to the spout from the impact surface.
